Recursive Improvement CAD harness

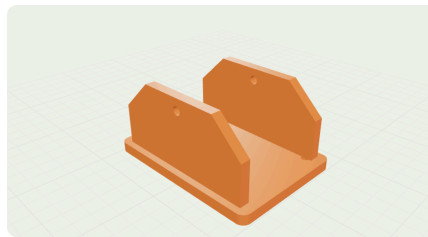

Sensor mount on a VTOL reference model · actual website CAD render

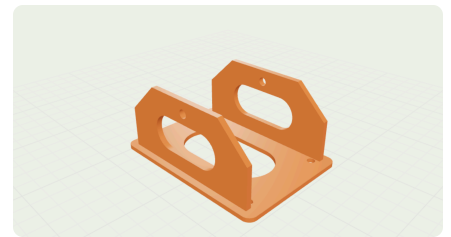

63.7%

less sensor-mount mass

83.54 g → 30.33 g · 8 design iterations

Baseline · 83.54 g

Best passing design · 30.33 g

Recorded sensor-mount study under fixed engineering screening checks. Simulation estimates; not physical validation.

AI agents generate CAD, evaluate designs, and improve their tools and working context between attempts.

1. Reflect and remember

2. Create and reuse tools

3. Evaluate and revise

MongoDB Atlas for Scalable Model Improvement

Documents preserve designs and evaluations. **Vector Search** retrieves prior results.**GridFS** stores CAD files and source snapshots.

Explore the designs.
